Fertility
Women in Sierra Leone have an average of 4.9 children, a slight decrease from 5.1 in 2008. Women in rural areas have 2.2 more children than women in urban areas.

Family Planning
Modern contraceptive use among married women has doubled since 2008 from 7% to 16% in 2013.

Reproductive Health
Six in ten births are attended by a skilled provider.

Child Mortality
For the 15-year period before the survey, child mortality rates–neonatal, infant, and under-5–have decreased.

Vaccination Coverage
Vaccination coverage has increased in Sierra Leone. Sixty-eight percent of children age 12-23 months are fully vaccinated, compared with 40% in 2008.
